

Lexia

How does Lexia help all students achieve mastery on their foundational reading skills?

Lexia has helped millions of advanced, on-level and at-risk students to meet their end-of-year, grade-level benchmarks. Within the first month of school, Lexia Reading can accurately predict which students are unlikely to meet their year-end benchmarks, if the intensity of instruction is not increased. The program then provides the strategies and resources for direct instruction to help each student finish the year at grade level. In a national study of all students using Lexia, two-thirds of high-risk students using the program as directed were able to close the achievement gap within one year.

Does Lexia provide personalized learning that is both student-driven and teacher-directed?

Using Lexia Reading, students are automatically placed at the proper level and work independently, at school or at home, on developing their foundational reading skills in the student activities. Teachers are provided with a data-driven action plan that tells teachers the specific skills on which each student needs instruction, and prescribes the precise amount of time on the software for each student. This way, teachers can spend their time focused only where it's needed.

Students are automatically grouped—by skill—for small group instruction. The program provides scripted, skill-specific instructional materials, called Lexia Lessons®. These structured lesson plans provide step-by-step strategies for teachers or paraprofessionals to address each student's skill-gaps. When a student completes a level in the program, teachers can access a customized certificate of achievement to recognize student progress.

How does Lexia reduce dependence on traditional testing and save teachers up to one month of instructional time?

While students are working independently in the program, Lexia's embedded assessment system, Assessment Without Testing®, provides educators with actionable, norm-referenced performance data without interrupting the flow of instruction to administer a test. The assessment data is correlated to and highly predictive of DIBELS, AIMSweb, MAPS and other commonly used norm-referenced assessments, dramatically reducing dependence on traditional testing. This lowers expenditures on assessments and, according to a national survey, saves teachers up to a month of instructional time.

Does Lexia make real-time data accessible anywhere, anytime?

Lexia Reading is the only comprehensive, technology-based reading program available for the iPad. The myLexia app for iPad, iPhone and iPod Touch allows mobile access to key information and data-driven action plans to help all of your students on the path to reading success. Student progress e-mails alert teachers when students need instruction and when students have achievement certificates available.
